CS23331-DAA-2024-CSE / 1-Number of Zeros in a Given Array

### 1-Number of Zeros in a Given Array

Started on	Friday, 19 September 2025, 1:34 PM
State	Finished
Completed on	Saturday, 20 September 2025, 7:42 PM
Time taken	1 day 6 hours
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

#### **Problem Statement**

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array. Input Format

First Line Contains Integer m - Size of array

Next m lines Contains m numbers - Elements of an array

**Output Format** 

First Line Contains Integer - Number of zeroes present in the given array.

Answer: (penalty regime: 0 %)

```
int mid = low + (high - low) / 2;
if ((mid == 0 | | arr[mid - 1] == 1) && arr[mid] == 0) {
    index = mid;
    break;
}

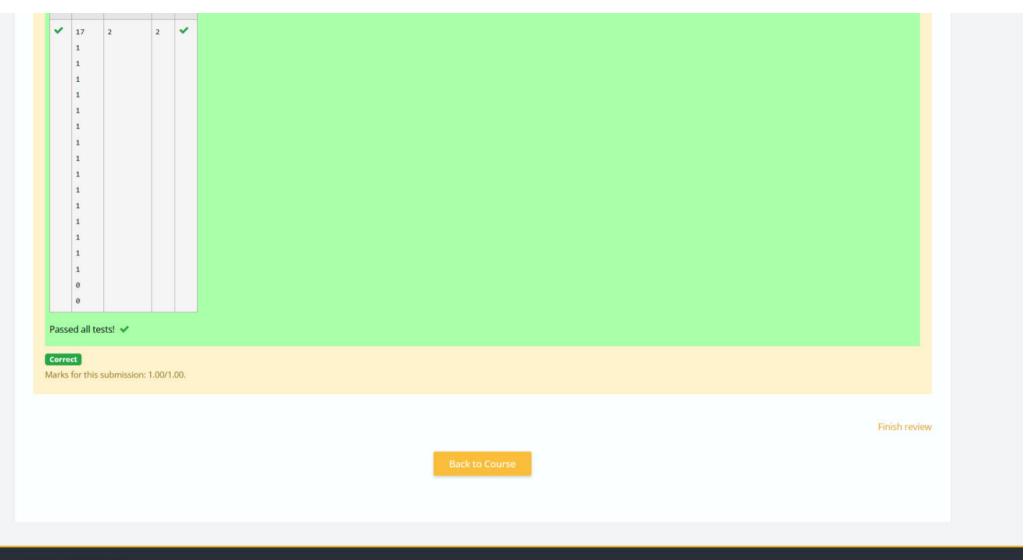

belse if (arr[mid] == 1) {
    low = mid + 1;
    }

else {
    high = mid - 1;
    }

if (index == -1) {
    printf("%\n", m - index);
    }

return 0;
}
```

CS23331-DAA-2024-CSE / 2-Majority Element

# 2-Majority Element

Started on	Friday, 19 September 2025, 1:44 PM
State	Finished
Completed on	Saturday, 20 September 2025, 7:56 PM
Time taken	1 day 6 hours
Marks	1.00/1.00
Grade	<b>10.00</b> out of 10.00 ( <b>100</b> %)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

Given an array nums of size n, return the majority element.

The majority element is the element that appears more than [n / 2] times. You may assume that the majority element always exists in the array.

#### Example 1:

Input: nums = [3,2,3]
Output: 3

### Example 2:

Input: nums = [2,2,1,1,1,2,2]

Output: 2

#### Constraints:

- n == nums.length
- 1 <= n <= 5 \* 10<sup>4</sup>
- $-2^{31} \le nums[i] \le 2^{31} 1$

#### For example:

Input	Result
3	3
3 2 3	
7	2
2 2 1 1 1 2 2	

Answer: (penalty regime: 0 %)

	Input	Expected	Got	
~	3	3	3	•
	3 2 3			

Passed all tests! 🗸

#### Correct

Marks for this submission: 1.00/1.00.

CS23331-DAA-2024-CSE / 3-Finding Floor Value

### **☑** 3-Finding Floor Value

Started on	Friday, 19 September 2025, 2:38 PM
State	Finished
Completed on	Saturday, 20 September 2025, 8:02 PM
Time taken	1 day 5 hours
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

#### **Problem Statement:**

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

#### **Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers - Elements of an array

Last Line Contains Integer x - Value for x

#### **Output Format**

First Line Contains Integer - Floor value for x

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 - int main() {
       int n, x;
scanf("%d", &n);
       int arr[n];
       for(int i = 0; i < n; i++) {
```

CS23331-DAA-2024-CSE / 4-Two Elements sum to x

### 4-Two Elements sum to x

Started on	Friday, 19 September 2025, 2:00 PM
State	Finished
Completed on	Saturday, 20 September 2025, 8:35 PM
Time taken	1 day 6 hours
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

#### **Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

#### Input Format

First Line Contains Integer n - Size of array

Next n lines Contains n numbers - Elements of an array

Last Line Contains Integer x - Sum Value

### **Output Format**

First Line Contains Integer - Element1

Second Line Contains Integer - Element 2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

	Input	Expected	Got

CS23331-DAA-2024-CSE / 5-Implementation of Quick Sort

# 5-Implementation of Quick Sort

Started on	Saturday, 20 September 2025, 9:29 PM
State	Finished
Completed on	Saturday, 20 September 2025, 10:06 PM
Time taken	37 mins 16 secs
Marks	1.00/1.00
Grade	<b>10.00</b> out of 10.00 ( <b>100</b> %)

Question 1 | Correct | Mark 1.00 out of 1.00 | Flag question

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

#### For example:

Input	Result
5	12 34 67 78 98
67 34 12 98 78	

#### Answer:

```
1 #include<stdio.h>
2 + void swap(int *a, int *b) {
```

```
*a = *b;
        *b = temp;
7 - int partition(int arr[], int low, int high) {
       int pivot = arr[high];
       for(int j = low; j < high; j++) {
           if(arr[j] <= pivot) {
               swap(&arr[i], &arr[j]);
14
       swap(&arr[i + 1], &arr[high]);
19 - void quickSort(int arr[], int low, int high) {
      if(low < high) {
           int pi = partition(arr, low, high);
           quickSort(arr, low, pi - 1);
           quickSort(arr, pi + 1, high);
26 - int main() {
       scanf("%d", &n);
       int arr[n];
        scanf("%d", &arr[i]);
       quickSort(arr, 0, n - 1);
        printf("%d ", arr[i]);
       return 0;
```

	Input	Expected	Got	
~	5 67 34 12 98 78	12 34 67 78 98	12 34 67 78 98	*
~	10 1 56 78 90 32 56 11 10 90 114	1 10 11 32 56 56 78 90 90 114	1 10 11 32 56 56 78 90 90 114	*
~	12 9 8 7 6 5 4 3 2 1 10 11 90	1 2 3 4 5 6 7 8 9 10 11 90	1 2 3 4 5 6 7 8 9 10 11 90	~
